NEW Deltaweld 500

along with legacy model 350

Call Today to Schedule a Demo!

- Reduce welder training time
- Minimize spatter & rework
- Maximize your operation's potential

Ready to weld

Deltaweld systems ship as a complete package. Simply hook up your primary power, add gas, wire & welding gun, and you're ready to weld!

Dedicated wire feeder options

- Intellx feeder—New arc control feature means welders can produce better welds with minimal parameter adjustments.
- Intellx Pro feeder—Adds Accu-Pulse®, EZ-Set, steel weld programs, and memory buttons.

Legacy meets pulse

Accu-Pulse offers a more forgiving arc and compensates for variations in operator technique, providing a wider operating window. Remove complexity and reduce training time.

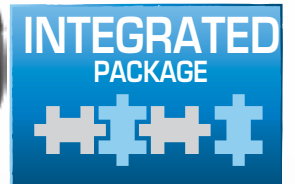

Even your greenest of green welders can be productive. Take it from Kyler, who welds for his dad after school.

The Deltaweld makes me weld like a pro!

Easy to use

Machines that are difficult to setup and adjust usually require more training. EZ-Set simplifies parameter setup based on material thickness, removing complexity.

Gouge mode

Dedicated gouge mode with plenty of power for up to 3/8" carbons.

Arc Connect™

Next generation communication to improve weld performance and allow point of use controls to be located at the feeder.

Quick-change discs provide exceptional grinding, deburring and blending flexibility in smaller areas with a twist-on and -off fastening system. This tool-free attachment design makes fast work of disc changes to maximize productivity and minimize downtime.

Roll-On

Aluminum Oxide—most common and affordable. Good starting point for most applications. Durable, with tough cutting edges, but dulls during use.

ALUMINUM OXIDE

Ceramic Alumina—provides the longest life & fastest cut rate. Newest grain innovation. Ultimate performance. Provides an aggressive, consistent cut under moderate to high pressure.

CERAMIC

Surface Conditioning—For cleaning, surface preparation & finishing on all metal surfaces.

**Not your
Father's
C-clamp!**

PIHER®

Piston like drive / head doesn't spin.

Material stays in place as you tighten the clamp!

Positioning system keeps jaws from sliding down the bar

Threads protected from weld spatter!

2:1 gearing — twice the speed and twice the compression with 1/2 the effort

Case-hardened non-slip brake on the moving jaw keeps the clamp secure under pressure. Remains completely locked even with vibration, temperature changes or humidity.
